Coloured Duralumin Rings

Rings made of coloured anodised duralumin, a more resistant metal than standard aluminium.

The colour is established annually by the C.O.M. Internal diameters range from 3.8 mm to 14.0 mm. These rings are also coloured on the inside.
The initials on the rings can be customised within the standardised spaces.
Federations can request rings with their own initials and codes, guaranteed as unique and that will not be repeated.
